EDI READINESS CHECKLIST

Why do we need to do EDI?	Do I have a budget for the project?	Are we ready to devote resourcese to do this?	Do we have the right technology to do this?	How many customers can we integrate?	How many documents a month could we automate?

• What are the driving forces?
 	
For example:
• Our customer is requiring us to do EDI
• We want to save on manual costs and eliminate errors.
	• You need both an EDI provider (like SPS Commerce) **AND**
	• An integrator (like EnTrust)
		• You will need at least one SME ready to assist on the project
		• You will need some IT resources occasionally
			• Is our ERP current enough to take on EDI?
			• Do we have the technology stack required?
			  ○ .NET 4.7.2
			  ○ 150MD Free Space
			  ○ Server 2016 or above
			  ○ SQL Server 2017 or above
				• Not all customers will be EDI capable, but you may have some larger customers who are
				• You also might be surprised at what other customers you have that **ARE** EDI capable
				• Could you have a Phase II project that brings even more efficiency for your team?
					• If the number is between 0-100 you may way to consider automation... if it's more than 100, you probably should consider it.
