

TAKE CHARGE OF YOUR AUTOMATION JOURNEY

ARE YOU BURDENED BY MANUAL PROCESSES AND INEFFICIENCIES?

Is your ERP system adding unnecessary complexity instead of streamlining your operations? It's time to rethink how your business utilizes technology. ERP systems should simplify, not complicate, your processes.

Introducing the Automation Audit: a systemic evaluation process designed to assess your organization's current use of technology to support your business practices, tools, and processes. The audit involves a comprehensive review of current workflows, software systems, and technological infrastructure to identify opportunities for simplification, efficiency gains, and cost savings through existing tools. By undergoing an Automation Audit, you'll gain actionable insights and recommendations to optimize your unique automation strategies, and align technology with your organizational goals.

WHAT TO EXPECT

During the audit, our knowledgeable team, evaluates your current ERP automation landscape. This encompasses various aspects such as assessing software platforms, process workflows, data management practices, and user experience. The audit processes typically begins with an initial consultation to define both user and executive objectives, scope, and key focus areas. Our consultants conduct in-depth reviews of existing systems, analyzing factors like system integrations, data flows, redundancy, reporting requirements, offline workarounds, transaction redundancy, and efficiency roadblocks.

Following the discovery sessions, you will receive a detailed analysis of findings, recommendations for automation opportunities, prioritized action items, and estimated implementation efforts where appropriate. Additionally, you may receive guidance on selecting appropriate automation tools, developing implementation strategies, and measuring the impact of automation initiatives. Overall, an Automation Audit equips your organization with valuable insights and an actionable plan for leveraging technology to drive business growth and efficiency.

WHAT'S INCLUDED

- ✓ A thorough analysis of your existing manual processes and systems
- ✓ Delivery of findings and actionable recommendations
- ✓ Facilitation of a meeting to review recommendations and create an actionable plan
