

WHAT IS AN EDI HEALTH CHECK?

EDI HEALTH CHECK

An EDI Health Check is a comprehensive assessment designed to evaluate the efficiency, accuracy, and compliance of your organization's Electronic Data Interchange (EDI) systems. It involves a thorough examination of your current EDI setup, including processes, integrations, and interactions with trading partners. By conducting an EDI Health Check, you gain invaluable insights into areas of improvement, potential risks, and opportunities for optimization within your EDI infrastructure.

WHAT TO EXPECT

During the EDI Health Check process, you can expect dedicated attention from our knowledgeable team, who will collaborate closely with your organization to ensure a thorough understanding of your EDI systems and processes. The process typically includes three-to-four-hour virtual discovery sessions, where we delve deep into your EDI setup, identify pain points, inefficiencies, and areas for improvement.

Following the discovery sessions, you will receive a detailed recommendations report outlining best practices and strategies for streamlining and automating your EDI processes to relieve pressure on your internal EDI staff. Finally, we'll present our findings and recommendations back to your team, ensuring everyone is aligned and empowered to implement positive changes. With an EDI Health Check from Encompass Solutions, you can expect actionable insights and tailored recommendations to optimize your EDI systems and drive your business forward.

WHAT'S INCLUDED

- ✓ A thorough analysis of your existing EDI processes and systems
- ✓ Delivery of findings and tailored recommendations report
- ✓ Facilitation of a meeting to review recommendations and create an actionable plan
